1)There will be suctionpumps at the top of bot and there will be wheels on the bottom .

whenever there comes an obstacle like a wall then the bot will be lifted and the suction pumps comes into play.They will be just used as a wheels on the wall.

2)we want to make this bot remote control because it can be more productive by making it an remote controlled bot.

3)we hope that we can complete it within 4 weeks .
