

There's a change in the project title we registered for. Sorry for inconvenience.

Project title: Full pc monitor

Implementation steps:

- 1) First get handy with the programming.
- 2) Then start making the app with the required features.
- 3) We will try to synchronize this app in pc with android mobile.
- 4) It will track all our activities from the beginning when our laptop is turned on that is track what the user is doing right now in the system and store the time spent on different applications (be it games, websites..).
- 5) We aim to make an individual aware where the time has been spent and refine the schedule accordingly.

Components required and their price estimate: Just a working laptop.

Learn: We expect to learn programming language at a good level.
