Project Description

1. Project title: Social Networking Site.

2. Implementation steps:

    Week 1: basic webpage and theme designing for all the pages of the site along with studying the further things like php,

    Search engine algorithms etc.

    Week 2: friendlist option, timeline designing and uploading options, messaging and notification options.

    Week 3: messaging and notification options (continued if required), login and logout options, creating exact profile and voice mail system.

    Week 4: search engine design, like and comment options(exact completion)

    Week 5: remaining backlogs and miscellaneous things along with some additional features(depending on ideas of current situation).

    Week 6: innovative feature of basic voice typing(just on proposal stage and will be implemented only if it is comleted).

3. Components: softwares like html, css, javascript, php, jango and others as required according to work.

    Price Estimate: Almost Zero.

4. Learning Expectation: we expect to thoroughly learn web designing from basics to advance level since we are amateurs at this field. We also expect to learn many algorithms of search engines, security and many others.

    We selected this topic hoping that we will learn maximum quanta of stuffs through the topic of social networking site right from web designing to coding.
